

## Session 1 : Introduction to SaaS

# What is SaaS

Ans: SaaS stands for "Software as a Service".

It is a cloud-based software delivery model where applications are hosted by a service provider and accessed over the internet.

### Key Characteristics :-

- 1) No local installation
- 2) Accessible via browser.
- 3) Subscription-based
- 4) Automatic updates.
- 5) Scalable and cost-effective.

### Benefits of SaaS

- (i) Lower upfront cost.
- (ii) Easy accessibility.
- (iii) Maintenance handled by provider.
- (iv) Supports remote work.
- (v) High availability.

### Examples of SaaS Applications

- (i) Salesforce - CRM
- (ii) Hubspot CRM - CRM & marketing
- (iii) Zoho CRM - Business CRM
- (iv) Microsoft Dynamics 365 - Enterprise CRM & ERP

## Session 2 :- Introduction to CRM

# What is CRM?

Ans: Customer Relationship Management (CRM) is software that helps businesses manage

manage customer interactions, sales processes, and customer data efficiently.

Why CRM is important?

Ans (i) Centralized customer information.

(ii) Improved sales tracking.

(iii) Better Customer Service.

(iv) Data-driven decision making.

(v) Automation of repetitive tasks.

How Business use CRM?

Ans (i) Track leads and customers.

(ii) Manage sales pipelines

(iii) Monitor customer communication

(iv) Generate reports and analytics

(v) Automate e-mail and follow-ups.

What is Multi-Tenancy?

**Ans** - A single instance of the software serves multiple customers (tenants) while keeping their data separate and secure.

Benefits of Multi-Tenancy:-

(i) Reduced Cost

(ii) Efficient Resource usage

(iii) Easy updates.

(iv) Scalability.

## #1 Real-time example of SaaS

Example:- Google Docs

Reasons:- (i) We don't install it on our computer.

(ii) We access it through a web browser.

(iii) Google hosts and maintains the software.

(iv) Updates happen automatically.

(v) Multiple users work at the same time.

## Real-time Scenario:-

Imagine a college project team:-

(i) one student writes the report.

(ii) Another student edits it.

(iii) The guide reviews and comments.

(iv) All are in different locations, work on the same document simultaneously, in real time. This is "Software as a Service (SaaS)" in action.

## #1 Key CRM Features

### Feature

Contacts

Deals

Pipelines

Automation

Reports

### Description

Stores customer details

Track potential sales

Visual sales stages

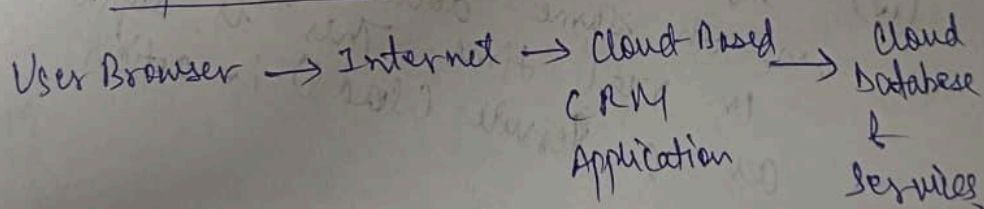

Automated emails, tasks

Sales & performance analytics.

Q:- Show how a CRM functions as a Cloud-Based SaaS application?

Ans:- A CRM functions as a Cloud-Based SaaS application by being hosted on cloud servers and accessed through the Internet using a web browser. Multiple organizations use the same CRM platform through a multi-tenant architecture, where data is securely isolated. The service provider manages infrastructure, updates, security and scalability, allowing users to focus only on managing customer relationships without worrying about software installation or maintenance.
